Definitions

% = % (w/w) = Percent (Weight of Analyte / Weight of Product)

** Total Potential THC/CBD is calculated using the following formulas to take into account the loss of a carboxyl group during decarboxylation step.

Total THC = THC + (THCa *(0.877)) and

Total CBD = CBD + (CBDa *(0.877))

Total Cannabinoids result reflects the absolute sum of all cannabinoids detected.

ND = None Detected (Defined by Dynamic Range of the method)

Testing results are based solely upon the sample submitted to SC Laboratories, Inc. SC Laboratories, Inc warrants that all analytical work is conducted professionally in accordance with all applicable standard laboratory practices using validated methods. Data was generated using an unbroken chain of comparison to NIST traceable Reference Standards and Certified Reference Materials. All decision rulings are in accordance with the MED and results uploaded to METRC. This report may not be reproduced, except in full, without the written approval of SC Laboratories, Inc. Sample Notes [S-0002045122]:

During LCMS analysis, the following compound did not meet the laboratory quality control criteria for the sample tested: Fulvestrant. The laboratory result was acceptable relative to the maximum report threshold stated in the NSF Certified for Sport Program - Guideline 306.

During GCMS analysis, the following compound did not meet the laboratory quality control criteria for the sample tested: Furazabol. The laboratory result was acceptable relative to the maximum report threshold stated in the NSF Certified for Sport Program - Guideline 306.

Job Notes:

Conformance assessment for delta-8-THC was performed under NSF Deviation # 2023-008.
